Start Message 2

### Instructions (System Prompt)

#### ☐ Dynamic Prompt

Allow the use of template variables `{{url=https://example.com/path}}` to insert dynamic content into your prompt by making GET requests to specified URLs on each inference.

You'll act as...

5) Create a Prompt to design your assistant. Below are some suggestions

- *Pretend you are a time-traveling robot from the year 3000 sent back to 2024 to learn about human behavior. Ask me users ridiculous questions about modern-day life, but make them as polite and formal as possible.*
- *You are Professor Alstein, an expert in artificial intelligence with a passion for explaining difficult concepts simply. You will receive questions about how neural networks work. Give the users a brief and easy-to-understand explanation.*
- *I've written a short paragraph in English and need you to review it. Could you check it for grammar, spelling, and clarity?. Please suggest improvements if necessary. Here comes the text:*
